**Paraben Corporation Releases Next Generation of Hard Drive Forensic Tools at Annual Conference**

Paraben Corporation, a Utah based digital forensics firm, was pleased to announce the release of P2 Commander 1.2 at the annual PFIC (Paraben Forensic Innovation Conference) in Park City Utah in November. The release shows the latest incorporation of cutting edge technology by Paraben Corporation.

Some of the new technology additions to P2 Commander include:

**Image Analyzer**-This new technology allows for the scanning of multi-media and graphic files in forensic images to find illicit content based on a multi-tier statistical engine. This allows investigators to quickly scan for pornographic images.

**Internet Explorer Analysis**-Reading through internet surfing data is the key to many pieces of evidence and can now easily be done through P2 Commander.

**Interface Enhancements**-With changes comes improvements to the interface to include the ability to bookmark multiple items at the same time as well as new data exportation options. This will make it easier for investigators to sift through the ever increasing amounts of data they find in their cases.

"P2 Commander truly looks at the problems we are facing in digital forensics and approaches them head on," said an enthused Amber Schroader, Paraben Corporation CEO. "With a database managing the system – P2 Commander is the next processing engine for every forensic examiner."

Details about the new P2 Commander technology as well as a demo version can be found on Paraben's website at [www.paraben.com](http://www.paraben.com).

**About Paraben Corporation**

Paraben Corporation specializes in computer forensic software for enterprises and consumers. Established in 1999, Paraben became a leader in handheld forensics with the release of PDA Seizure in 2002, the first commercially available tool for cell phone forensics. Paraben then combined the two tools to create Device Seizure, a comprehensive forensic solution for cell phones and PDAs. Paraben also has many digital forensic software titles for forensic analysis of hard drives and media—P2 Commander, and specialized tools for enterprise level forensics—P2 Enterprise, training classes, and forensic hardware.
