PCME THE Mobile Forensic Examiner Certification

Paraben Corporation, the industry leader in handheld and mobile forensics, has announced the launch of its new mobile forensic certification program – PCME. Paraben’s Certified Mobile Examiner is the premier industry certification for mobile forensic examiners. Digital forensic examiners are faced with more and more types of digital evidence. The need for specialized mobile forensic examiners has created a need for certification. “The certification requirements are stringent and solid which will make sure that we are all working to be the best examiners possible,” Stated Amber Schroader, CEO of Paraben Corporation.

Paraben has based its training on a slightly different approach than other companies with a comprehensive 360° system that covers not only how to use technology but how the underlying device technology works. “Having the company do a certification for mobile forensics was a natural progression. We wanted to continue with our commitment to quality training with the best certification out there,” expressed Kevin Martin, lead mobile trainer at Paraben Corporation. Unlike other training programs, Paraben’s PCME doesn’t focus solely on cell phones. This comprehensive approach to certification keeps in line with Paraben’s 360° approach to forensics. By covering cell phones, PDAs, hybrid devices, SIM cards, and even GPS devices and by combining both theory and device knowledge with practical examinations and thorough testing, Paraben’s certified examiners will be prepared for whatever the world of handheld forensics throws at them. Details about how to become PCME certified can be found at Paraben’s training website: <http://www.paraben-training.com/pcme.html>

ABOUT PARABEN

Paraben Corporation specializes in computer forensic software for enterprises and consumers. Established in 1999, Paraben became a leader in handheld forensics with the release of PDA Seizure in 2002, the first commercially available tool for cell phone forensics. Paraben then combined the two tools to create Device Seizure, a comprehensive forensic solution for cell phones and PDAs. Paraben also has many digital forensic software titles for forensic analysis of hard drives and media—P2 Commander, and specialized tools for enterprise level forensics—P2 Enterprise, training classes, and forensic hardware.
